📍 Noida, India

SUMMARY

Software engineer with 4+ years of academic and hands-on development experience across full-stack web development, Python programming, SQL, and data-driven applications. Built responsive frontend interfaces, backend modules, CRM workflows, and production-ready features through academic work and real-world client projects. Strong understanding of SDLC, Git-based version control, database design, debugging, and scalable application development. Interested in software engineering roles focused on building reliable, efficient, and user-centric systems.

EDUCATION

Master of Computer Applications (MCA)

Amity University Online

📅 2025 – Present

Bachelor of Computer Applications (BCA)

Amity University, Noida

📅 2022 – 2025

Senior Secondary (CBSE) — 90%

Ryan International School, Noida

📅 2022

Secondary (CBSE) — 85%

JT Golden Jubilee School, Prayagraj

📅 2020

PROFESSIONAL EXPERIENCE

Software Developer

Main Flow Services and Tech, Gurugram

📅 2025 – 2026

- Developed and enhanced web applications using HTML, CSS, JavaScript, Python, and SQL with a focus on performance and usability.
- Worked on frontend and backend development tasks, contributing to application features, bug fixes, and workflow improvements.
- Designed and executed SQL queries for structured data handling, reporting, and database operations.
- Used Git and GitHub for version control, code collaboration, and change management.
- Debugged and optimized application issues to improve reliability, maintainability, and user experience.
- Collaborated with team members in an SDLC-based environment to deliver software solutions on time.

PROJECTS

Medical Global CRM Platform

Full-Stack Client Project

📅 2026

- Built a full-stack web platform for a UK-based medical company, including both frontend and backend development.
- Developed core CRM workflows to manage operational activities, internal processes, and day-to-day business tasks.
- Implemented responsive user interfaces, form handling, data management, and role-based workflow features.
- Integrated backend logic, database operations, and end-to-end functionality for a production-ready system.
- Delivered the project over a 2–3 month development cycle, and the platform is currently operational in a real business environment.

Netflix Data Analysis

Python Data Analysis Project

📅 2025

- Conducted exploratory data analysis using Python, Pandas, and NumPy to extract actionable insights from structured datasets.
- Cleaned, transformed, and processed data to improve consistency and analysis quality.
- Created visualizations using Matplotlib to identify trends, patterns, and content-level insights.

Sentiment Analysis using NLP

Machine Learning Project

📅 2024

- Developed a sentiment analysis model using Python and Scikit-learn for text classification tasks.
- Performed preprocessing steps including tokenization, stop-word removal, cleaning, and vectorization.
- Implemented and evaluated machine learning models for sentiment prediction and classification accuracy.

Gimmy Web Application

Frontend Web Application

📅 2023

- Built a responsive web application using HTML, CSS, JavaScript, and React concepts for structured UI development.
- Designed interactive components and organized layouts to improve usability and visual consistency.
- Optimized the application for responsiveness and smooth usage across multiple devices and screen sizes.

TECHNICAL SKILLS

Python
Java
SQL
React.js
JavaScript
HTML / CSS
Git & GitHub
DBMS
REST APIs
Pandas / NumPy
Scikit-Learn
Machine Learning
Operating Systems
Computer Networking

CERTIFICATIONS

- NPTEL Python Programming – IIT Madras
- NPTEL Innovation and Entrepreneurship – IIT Bombay
- AWS Cloud Fundamentals
- Cybersecurity Basics
- React.js Frontend Development
- Java Programming Certification
